

Etienne Tot

Fullstack Software Developer

I'm a dedicated fullstack developer with a passion for clean code, structured data flows, and pragmatic solutions. I enjoy tackling complex challenges – especially when solved elegantly as a team and turned into shared growth.

I'm driven not just by technology, but by the ambition to build systems that are clear, stable, and maintainable – from backend to frontend. I work solution-oriented, communicate openly, and bring structure to complexity.

Work Experience

01 Fullstack Software Developer

FJD Information Technologies AG, Feldkirchen
Feb. 2026 – Present

- Frontend architecture and continuous development of a scalable self-service portal using React and TypeScript
- Development of complex UI and state management solutions with a focus on maintainability, data flow architecture, and rendering performance
- Integration of structured backend data via REST APIs in close collaboration with backend teams
- Independent implementation of features, bug fixes, security fixes, and technical improvements including CI/CD-based deployments
- Shared responsibility for code quality, code reviews, system stability, and continuous platform improvement
- Collaboration with backend, UX/UI, and DevOps teams in agile development environments

02 Fullstack Software Developer

DealerCenter Digital GmbH, Landshut
Mär. 2024 – Jan. 2026

- Development and expansion of automated ETL pipelines with Node.js for processing large-scale vehicle data from heterogeneous sources
- Implementation of robust web scraping solutions using Puppeteer for structured acquisition and transformation of external product data
- Design and maintenance of CI/CD-driven data processes with Jenkins to ensure stable and scalable deployments
- Normalization and harmonization of complex raw data into consistent and structured data models
- Containerization and development automation using Docker and GitHub within distributed team environments

03 Working Student – CS

Tiffinger & Thiel GmbH, Landshut
Okt. 2022 – Apr. 2023

- Development of cross-platform web and mobile applications using React and TypeScript
- Design and integration of REST-based interfaces between frontend and backend systems
- Development of automated SEPA XML processes and integration of transaction-related business logic
- Optimization of high-performance database queries and creation of maintainable unit tests for React components
- Redesign of existing web interfaces and implementation of new landing pages with a focus on UX and performance
